Date : February 15, 2002

To Whom It May Concern:

In our Plant at Roha manufacturing Viscosity Index Improver, we are using many ROTODEL rotary gear pumps for different viscous liquid transfer applications. On being satisfied with the performance of the pumps, we thought of using rotary gear pumps for highly viscous additive transfer application with variable flow. For this application, besides very high viscosity the pump had to encounter high pressure. On the recommendations of DEL, we procured and installed one ROTODEL rotary gear pump Model RDNX-300-M to run at 720 RPM with inverter drive. For the last two years, the pump is working very satisfactory delivering 300 LPM highly viscous material (viscosity more than 10,000 CST) at pressure of 22 bar. Subsequently, we have bought one more pump. We appreciate the capability of Del Pd Pumps & Gears (P) Ltd. to supply pumps for critical applications with appropriate guidance & technical support.
